

THE PROPOSITIONS ON THE IMPLEMENTATION OF THE INFORMATION RELATIONS MECHANISM IN THE REGULATORY ACTIVITIES IN UKRAINE

LARYSA VDOVYCHENKO

Candidate of Economic Sciences, Admiral Makarov National University of
Shipbuilding (Mykolaiv, Ukraine)

Abstract: The article gives recommendations on the formation of the mechanism of information in Ukraine relations in the regulatory activities. The proposed recommendation allows to see the situation in the field of the regulatory activity in dynamics and determines the effectiveness of reforms in public administration of the national economy both at the state and regional levels. Practical implications: the improving of procedures for the regulatory activities by maintaining registers of regulatory acts at the national and regional levels, to ensure free and unhindered access to information from these registers, creating conditions for effective competitive environment in the regional commodity markets, reducing barriers to entry and promotion of new producers of commodity markets, increasing the efficiency of public regulation of the economic activity in the national economy.

Keywords: regulatory activities, information relations, public administration, e-information interaction.

INTRODUCTION

In Ukraine since the beginning of 2004 [1] a law setting out the stages of the regulatory activities – the preparation, adoption, and tracking the effectiveness of regulatory acts (RA), that legal acts (LA) in management. No state authority, including the local authorities cannot change the rules that governing the business activities, without keeping special procedure established by this law.

MATERIALS AND METHODS

One of the reasons for the low efficiency of the regulatory activity in Ukraine is the lack of comprehensive scientific support of the whole process of its implementation. Most economic studies limit the scope of scientific interest in the final stage of RA, that their impact on the economy remains unnoticed stages of preparation and adoption of these acts, which is just the foundation for their effectiveness and feasibility. Some Ukrainian scientists from the field of public administration and law examine the stages of preparation and adoption of RA, but the analysis of their economic effectiveness in all subjects of the regulatory activities is unavailable. Despite the fact that the economic and administrative and legal research covers a range of factors that affect on the

efficiency of providing the regulatory activities, aside scientists formation is a problem of formation of the mechanism in Ukraine that would provide the information interaction of subjects of the regulatory activity, including being able to be provided in this area the electronic communication between its participants at the national and regional levels.

RESULTS

The choice of the topic of its article is based on the research conducted by the author towards developing practical recommendations on the formation of the mechanism of information in Ukraine relations in the regulatory activities.

To form an integrated system of effective regulatory policy in Ukraine is appropriate:

1) The development and subsequent implementation at the national level of Action Plan «Improving the quality of the regulatory activities in the context of e-government in Ukraine» («road map»).

2) The creation and development of the information system (IS), forming electronic information interaction (EI) of the entities of the regulation activity (ISEI «Regulatory activity»).

The further development of the state system of regulation of the information relations in the regulatory activity is determined by:

- the Concept of e-government in Ukraine [2];
- the prescript of the President of Ukraine and the Cabinet of Ministers of Ukraine.

The proposed «road map» (tab. 1) is a set of measures to optimize information relations in regulatory activity.

Table 1 – Events of «road map» (the author's development)

Names of events	Type of documents to be taken	Result
Creating a single state portal on the disclosure of the regulatory activities available on the Internet	Law and LA	The disclosure of the regulatory activity, openness in the interaction of the regulatory activities at all levels of the government, namely the creation of state and regional IS «United state portal on the disclosure of the regulatory activity». In order to make things: 1) In the regulatory activities at the national level: – ensuring EI central authorities and other state-

		level regulatory bodies of the authorized body for the implementation of regulatory policy (competent authority) – implementation of EI competent authority of its regional bodies – implementation of EI Ministry of justice of Ukraine authorized body 2) In the regulatory activities at the regional level: – ensuring EI regional (city), district administrations, regional (local) of central authorities and local authorities with territorial authorities competent authority – EI implementation of territorial justice with territorial authorities competent authority
Creation of open IS «Single information-analytical system «Regulators – business regulation»	Law and LA	The creation of state and regional IS «Unified information-analytical system «Regulators – business regulation»
Unification of exchange format subjects with EI regulatory activities based on international standards	Law and LA	Harmonization and standardization of the formats of electronic documents used to communicate with EI business regulatory activities, ensuring openness and without of money formats of electronic documents used to communicate with EI business regulatory activities
The possibility of archiving documents required for updating the long term electronically	Law	The introduction of the possibility of archiving documents required for updating the long term

		electronically
The ability to use electronic records in court	Law	The use of electronic documents as evidence in court
Monitoring the achievement of planned activities	Prescript of the Cabinet of Ministers of Ukraine	Assessing workload associated with the implementation of information requirements

The measures provided by «road map» will facilitate the cooperation between the state, employers and individuals within the regulatory activities that will enable to increase transparency and comfort of doing business in Ukraine. The result of the «road map» is to increase the investment attractiveness of Ukraine (by streamlining the regulatory activities and implementing best practices), increase the competitiveness of Ukrainian goods (by eliminating redundant regulatory requirements). As a result, there will be positive adjustments in business development and innovation sector of the economy.

In addition, it is planned to reduce the financial and organizational costs of the business community associated with the interaction of the government with businesses.

The subject of the «road map» is the formation of the mechanism of information relations in the regulatory activity.

ISEI «Regulatory activity» should integrate key management processes of the implementation of the regulatory activities in Ukraine for all range of participants (regulators, authorized body (its territorial bodies), central authorities (their regional (local) authorities), local authorities, justice and other authorities **of** public administration and business regulation).

Currently individual IS and resources are established and operated, including: the official site of the authorized body; the official website of the Ministry of justice of Ukraine; official websites of territorial justice; official websites of regulatory bodies; web sites design and RA subjects of regulation, which provides information on the regulatory activities; IS regional regulatory bodies; other public IS.

The architecture of ISEI «Regulatory activity» should build advisable based on the integration of national and regional segments. State segment is considered to implement extending the functionality of existing IS of Ukraine through the respective modernization of the necessary components.

ISEI «Regulatory activity» will consist of open sections, information subsystems (segments), regional segments (modules) and will include integrated:

- Government IS «Unified information-analytical system «Regulators – business regulation»;

- Regional public IS «The only information-analytical system «Regulators – business regulation»;
- Government IS «United State portal on the disclosure of the regulatory activity»;
- Regional state IS «United State portal on the disclosure of the regulatory activity».

ISEI «Regulatory activity» will function on infrastructure nodes of the complex of integrated IS that implement the principle of «cloud» computing by automating the processes of computing power, application deployment, allocation and accounting applications of the consumed resources.

Using ISEI «Regulatory activity» will be provided following automation functions (processes) in the regulatory activities:

- the organization and implementation of the electronic document management in the system of regulators and competent authority;
- the collection, registration, storage, processing, verification of the information on the regulatory activity coming from the regulators and regulated entities for the purposes of the functions by the competent authority;
- the e-document management between the competent authorities and the judicial authorities, between the regulatory agencies and business regulation;
- the analysis of the documents justifying the adoption of RA, calculation of statistical indicators and expected consequences;
- the input, modification and termination of the state regulation;
- the formation and maintenance of existing registers, those which need changes and canceled RA;
- the court settlement of disputes related to the regulatory activities.

The regional ISEI «Regulatory activity» in Ukraine EI provide automation to implement the control powers of authorized body for the implementation of the government regulations and other government and business regulation process proceedings regulators of the preparation, adoption, tracking performance and review of RA.

Later in Ukraine the technical and functional requirements for regional segments and the process of their integration with ISEI «Regulatory activity» should be formed and a typical regional segment and software for the interested individuals of the regulatory activities will be created.

ISEI «Regulatory activity» should also include state and regional public IS «United state portal on the disclosure of the regulatory activity», which will be located in a uniform format information, referred to the disclosure standards.

Expected results of the proposed mechanism of the information relations in the regulatory activity that is logically constructed systematized set of actions aimed at improving the quality of the regulatory activities in the context of e-government and the creation and development ISEI «Regulatory activity» in Ukraine is the improving procedures for the regulatory activities by maintaining registers RA at national and regional levels, to ensure free and unhindered

access to information from registers RA, creating conditions for effective competitive environment in regional commodity markets, reducing barriers to entry and promotion of new producers of commodity markets, increasing the efficiency of public regulation of the economic activity in the national economy.

DISCUSSION AND CONCLUSION

Identified prospects of the regulatory activities give reasons to believe that today, conducting radical market reforms in Ukraine; the state has no right to shift the market to solve all social problems. For the successful development of Ukraine market relations are needed but in accordance stronger role of the state is necessary. Strengthening the role of the state in the regulating economic processes and business management with simultaneous application of the proposed mechanism of information relations in the regulatory activities will support the increase of the rates of the development of Ukraine.
